

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

clusive, 1909, while the writer of this report was attached to a field party sent out by the Michigan Geological and Biological Survey to investigate the biology of the region about Brown Lake, Dickinson County. The report deals with "Habitats and Habitat Distribution of Species," "Migration," "Effect of the Burn on the Local Distribution of the Birds," and the systematic annotated "List of Species." There are 88 species listed. The paper is a welcome contribution to the distribution and ecology of the region in question.

Results of the Shiras Expedition to Whitefish Point, Michigan. Birds. By Norman A. Wood. Reprinted from Sixteenth Report Michigan Academy of Science. Pp. 55-73.

"Whitefish Point is in Chippewa County, in the northern peninsula of Michigan." The birds are first grouped according to habitat, and then arranged in systematic order, with annotations, the dates of occurrence being given. We particularly commend the method here employed of grouping the species according to habitat preference. The paper is a valuable contribution to local faunal and floral literature.

Biological Division Zoölogy. From the Summary Report of the Geological Survey, Canada, for the calendar year 1914. By P. A. Taverner. With a repaging, 1-15.

The particular part of this report with which we are concerned is the report of "The Athabaska-Great Slave Lake Expedition, 1914," by Francis Harper, and the "Canadian Arctic Expedition, 1913-14," by R. M. Anderson. The whole report is devoted to biology in general. It is worth noting that Mr. Taverner concludes that the region which the expedition to Athabaska-Great Slave Lake visited was "found to lie almost entirely within the Canadian zone." The U. S. Biological Survey has regarded it as Hudsonian. Mr. Harper gives a list of 85 species of birds, and Mr. Anderson a list of 52. The vegetation is also commented upon, and lists of other Vertebrate animals given.

Propagation of Upland Game-Birds. The National Association of Audubon Societies. Bulletin No. 2, April, 1915. By Herbert K. Job. Price 25 cents.

This Bulletin contains detailed directions for propagating quail, ruffed grouse, wild turkey, and pheasants, with brief remarks on prairie chicken and doves and pigeons. Three pages on "Control of Vermin" conclude the Bulletin. It is interesting to note that the author includes domestic cats under the head of vermin. Numerous illustrations add value to the paper. It is a paper that can be highly commended.
